Energy storage systems (ESS) for the home store electricity for later use, typically using batteries like lithium-ion or lithium iron phosphate.

What is a liquid cooled battery energy storage system?

The system consists of: Ready to install liquid-cooled battery energy storage system with one (2-hour version) or two (4-hour version) battery cabinets, and a PCS cabinet. Liquid cooling provides two years longer battery service life and 15% higher discharge capacity, while maintaining less than 2.5 degree C delta between cells.

What are emerging energy storage solutions for homeowners?

Emerging energy storage solutions for homeowners are focusing on innovative technologies and approaches that enhance energy independence, cost-effectiveness, grid resilience, sustainability, and ease-of-use.

What is long-duration energy storage (LDEs)?

Long-Duration Energy Storage (LDES) systems are technologies designed to store energy for extended periods -- typically 8 hours or more -- and release it when needed. They help balance energy supply and demand, especially for renewable energy sources like solar and wind, which produce power intermittently.
