Scientists have developed a brand new, clear coating that can be applied to any standard window to turn it into an effective solar panel - while still keeping the window largely ...

A new type of window glass - in effect a transparent solar panel - is the objective of joint research being done by the University of the Free State (UFS) in South Africa and Ghent University ...

The company ClearVue PV has developed a solar glass that can be used in construction to create clean energy.

What is Photovoltaic Glass? Photovoltaic glass is a type of glass that integrates solar cells into its structure, allowing it to generate electricity from sunlight.

The problem resides in the type of glass used to make solar panels. With current technology, this glass allows 4 percent of sunlight hitting a panel to be reflected back into the ...

Scientists in China have invented a new type of coating that can turn standard windows into solar panels. The discovery could supercharge the global clean energy transition, according to ...

Measuring 101.6 cm by 152.4 cm, this innovative glass window can generate solar power while maintaining a clear view, marking a significant milestone in the quest for sustainable building ...

Scientists have created a transparent solar coating that turns ordinary windows into clean energy generators without affecting clarity. Using cholesteric liquid crystal layers, the coating...
