The RD33772C14VEVM is a standalone battery management system (BMS) reference design targeting automotive 14 V lead-acid replacement applications. It is ideal for evaluation, development and rapid ...

A family of voltage measurement products (LTC6810/LTC6811/LTC6812/LTC6813) providing flexible cell configurations to create unique, EMI robust, high voltage battery solutions that can balance cells both ...

Analog Devices, Inc. (ADI) advances battery management system (BMS) technology through a broad and highly integrated portfolio of battery management ICs designed for accurate ...

The low risk factor with overcurrent protection provided by ADI's BMS feature allows for very safe operation and cuts down on the risk of damaging both the battery and the system connected as a load.

This article will provide a brief description of some of the important metrics used to improve battery efficiency and guide on key considerations when selecting battery management systems for these ...

Battery backup managers enable battery charging and backup power from the battery to the system output in the event of a system power removal or outage. Explore our battery management IC ...

The low risk factor with overcurrent protection provided by ADI's BMS feature allows for very safe operation and cuts down on the risk of damaging both the battery and the system ...

ADI's BMS solutions are optimized for 6 to 18 cell modules and offer a range of features including low-power continuous battery monitoring, robust diagnostics, and the world's best accuracy guaranteed ...
