Following the societal electrification trend, airports face an inevitable transition of increased electric demand, driven by electric vehicles (EVs) and the potential rise of electric aviation ...

In cooperation with Munich Airport, the mobile energy container is being used to charge electric vehicles in a trial project that is expected to last 12 months. The energy container is located ...

The greatest merit of folding photovoltaic panel containers is their high degree of mobility, avoiding the large occupation of land by traditional solar power generation systems.

From India to Australia, California to Germany, airports are installing vast solar arrays across terminal rooftops, parking structures, and unused land. These installations range from supplementary power ...

Munich Airport has opted for an innovative system for sustainable energy generation using a container with photovoltaic panels and wind rotors. The equipment, from FlowGen, a ...

Munich Airport, in collaboration with green energy company FlowGen, is testing an innovative mobile energy container equipped with photovoltaic panels and wind rotors to generate ...

In the capital of the German state of Bavaria, an innovative system for sustainable energy generation and at-source output is currently being used at Munich Airport. The all-in-one container ...

There, newly delivered rental cars will be charged using energy generated by three small wind turbines and photovoltaic panels. On a windy and sunny day, the test container can produce ...
