Global demand for batteries is increasing, driven largely by the imperative to reduce climate change through electrification of mobility and the broader energy transition.

EVs predominantly rely on lithium-ion batteries for power and accounted for over 80 percent of the global lithium-ion batteries demand in 2024. Find up-to-date statistics and facts on...

50 billion in battery manufacturing, creating more than 100,000 jobs. Nearly \$33 billion of federal investment has supported onshoring of critical capabilities and commercialization of next-generation ...

New research by Florian Degen and colleagues evaluates the energy consumption of current and future production of lithium-ion and post-lithium-ion batteries.

The National Laboratory of the Rockies's (NLR's) Storage Futures Study examined energy storage costs broadly and the cost and performance of LIBs specifically (Augustine and Blair, 2021).

Lithium-ion battery manufacturing capacity, 2022-2030 - Chart and data by the International Energy Agency.

U.S. import and export data on lithium-ion energy storage batteries suggest that consumption and domestic production of lithium-ion batteries increased. The data also indicate ...

The unstoppable rise of batteries is leading to a domino effect that puts half of global fossil fuel demand at risk.
