Excellent product appearance and performance Two-sided double-glazed modules, symmetrical structural design, low risk of hidden cracks.

ZERO LID (Light Induced Degradation) N-type solar cell has no LID naturally which can increase power generation.

Trina Solar, the world leading global PV and smart energy total solution provider, recently announced that it has begun mass production of N-type i-TOPCon...

Generally, the front and back glass layers in these modules have the same thickness, contributing to their balanced structural integrity. This design not only enhances the module's ...

Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people stomp on it (during ...

The findings suggest that the combination of n-type TOPCon cells and EVA encapsulation presents a higher risk of degradation. To mitigate this risk, alternatives to EVA or corrosion-resistant ...

Dual glass is the preferred structure for the rear side cover of the N-type modules because the glass-glass version can maximize the advantages of the N-type.

Better Performance Our modules perform better on sunny and hot days thanks to its optimized temperature coefficient.
