In April 2024, an updated study on the grid connection backlog finds the following: Solar energy projects led the U.S. interconnection queues with a combined capacity of 1,080 GW, followed ...

The queues indicate particularly strong interest in solar, battery storage, and wind energy, which together accounted for over 95% of all active capacity at the end of 2023.

Solar projects had an even lower percentage in terms of connecting to the grid. Only 13% of solar projects and 10% of the capacity were operational after submitting requests between 2000 ...

Given our growing backlog and our outlook for 2023 we have made achieving profitability a corporate target for the year. In addition, we are continuing due diligence on the Canadian ...

Solar Alliance's strategy is to build, own and operate our own solar assets while also generating stable revenue through the sale and installation of solar projects to commercial and utility ...

This is a record commercial solar project backlog for Solar Alliance and provides a strong foundation for growth during the balance of 2023 and into 2024.

This represents more than twice the total installed capacity of the existing U.S. power fleet, creating unprecedented challenges for solar EPCs nationwide. Quick Answer: The interconnection queue ...

It provides solar panel installation options for commercial solar projects, such as roof space, carports, parking lots and ground mounted arrays. It serves industries, such as agriculture, ...
