By 2030, the results indicate that the rooftop area in the Yangtze River Delta urban agglomeration will have increased by 1.11 times, the useable rooftop area will expand by 338 square ...

The research findings confirm the application potential of new energy sources in the Yangtze River Economic Belt and quantify the emission reduction effects of new environmental ...

This study provides policy makers and potential investors with information on solar energy potential in the Yangtze River Delta region that would contribute to solar power generation development.

Many new-energy-powered vessels, such as pure electric, hydrogen-fueled and LNG-fueled ships, have been built and are now operating throughout the Yangtze River Basin.

With a total installed capacity of 71.7 million kilowatts, the corridor is comprised of six mega hydropower stations along the Yangtze River, the largest river in China. With 110 generating ...

“With the help of ultra-high voltage transmission lines, green electricity produced along the upper and middle reaches of the Yangtze was delivered to southern and eastern power demand ...

The Yangtze corridor is emerging as the world's largest clean-energy trade route, powered by HVDC, solar, and battery-electric vessels.

Distributed renewable energy developed well in the Yangtze River Delta region. Until the end of 2019, the total amount of distributed solar PV developed in Jiangsu, Zhejiang, and Shanghai ...
