A split phase inverter in the U.S. has 110V on one side, neutral, and 110V on the other side, just like how your house is panel is probably wired. You can power 110V items off either of the ...

Short Answer: The size you choose depends on the watts (or amps) of what you want to run (find the power consumption by referring to the specification plate on the appliance or tool). We recommend ...

yes. you can use 3-phase inverter if you need 220V and 380V. Check first your main panel on how it was wired, because that's where you're going to connect it.

Special inverters can be connected together to produce 220-volts. This process is called stacking. This process cannot be used for any type of ...
