---

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...

Let's face it - Europe's energy transition is hitting speed bumps. The continent needs 112 GWh of new battery storage by 2030 to meet its renewable targets [10], but local manufacturers can't keep up.

China has made a groundbreaking move in the energy sector by putting its first large-scale Sodium-ion Battery energy storage station into operation in Guangxi, southwest China.

China has a goal to install 180 gigawatts of battery energy storage systems by the end of 2027, with a direct project investment of \$35.2 billion. Large-scale battery storage systems are ...

The Minety Battery Storage Project is one of the largest energy storage projects in Europe and the first large battery storage project undertaken by Chinese power generation enterprises in developed ...

The three parties will join hands to develop and invest in battery energy storage projects in Europe. Leveraging the professional expertise of each party, the tripartite cooperation will commit to ...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to 180GW by ...

Welcome to our European Market Outlook for Battery Storage 2025-2029 Though the battery energy storage revolution continued to unfold across Europe in 2024, setting yet another annual installation ...
