Today, covering an area of 609 square kilometers, this solar power base boasts a power generation capacity of 8,430 megawatts, making it the largest in the world, according to Qeyang, ...

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...

China's solar capacity has expanded far beyond fivefold in the last five years and could double by 2025. Located in remote Qinghai province, with a total installed capacity of 2.2 gigawatts, it is China's ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

The country added 120 GW of wind and solar power in 2022, 290 GW in 2023, 360 GW in 2024, and 434 GW last year, of which about 119 GW of wind power and 315 GW of solar power, ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

Located in China's seventh largest desert, the project has a total installed capacity of 160 MW, including 80 MW of photovoltaic power, 40 MW of wind power, and other energy resources.

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.
