---

China's energy storage capacity grew 54% to 213.3 GW in 2025, with new-type systems like LFP batteries making up 67.9% of the total, according to the latest CNESA annual data report.

China's new energy storage capacity has exceeded 100 million kilowatts, marking a major milestone in the nation's transition toward a new-type energy system and consolidating its ...

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government report ...

Renewables and energy storage drive China's power system growth Renewables and energy storage in China delivered another historic milestone in 2025. Fueled by the rush to secure ...

By the end of 2023, China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage duration of 2.1 ...

Carbon Brief explores how China has been driving the energy storage sector forwards and how it fits into the nation's wider energy transition.

Ahead and heading into a new era for new energy, it is expected that China's energy storage capacity and its BESS capacity in particular will grow at a CAGR rate of 44% between 2023 and 2027.

As China accelerates the deployment of renewable energy, the stability of the power system faces persistent operational constraints. Energy storage, serving as a pivotal enabling ...
