-----

The energy storage spring brake air chamber is simple in structure, has remarkable driving and parking braking effects, is generally applied to and mounted on a car drive axle, and provides...

A spring energy storage brake air chamber for preventing parking brake force attenuation comprises a rear cylinder body, a pull rod bolt assembly connected with the rear cylinder body and a...

Based on energy storage and transfer in space and time, elastic energy storage using spiral spring can realize the balance between energy supply and demand in many applications, such ...

A technology for assisting braking and clockwork, applied in vehicle parts, transportation and packaging, braking components, etc., can solve the problems of high conversion heat energy and rapid brake ...

If this chamber is ventilated, the spring-charged brake cylinder 6 is released against the force of the spring and the vehicle can be put into driving operation.

Spring energy storage structure and working principle of composite brake chamber? Spring energy storage composite brake chamber consists of two sets of relatively independent chamber combination.

The present invention relates to auto repair technical field, especially relate to a kind of obturator for the maintenance of spring energy-storage brake cylinder.

The invention relates to a spring brake cylinder (1) for brake systems of vehicles.
