The U.S. Department of Agriculture (USDA) and U.S. Department of Energy (DOE) are working together to support farmers and rural communities make informed decisions about renewable energy.

Over the last decade, solar energy production has grown 25% on average per year and installation costs have dropped more than 40%, according to the Solar Energy Industries Association ...

Agrivoltaics is the use of land for both agriculture and solar photovoltaic energy generation. It's also sometimes referred to as agrisolar, dual use solar, low impact solar. Solar grazing is a variation ...

With ample land, strong solar potential, and new federal funding streams, rural solar development is on the rise. From farms to fairgrounds, small towns to tribal lands, solar is becoming a critical tool for ...

At American Farmland Trust, we talk to farmers every day who are harnessing these new opportunities made possible by solar.

The development of solar energy initiatives can be traced back to the early days of solar power research. Advancements in technology and a growing understanding of the potential benefits ...

This dual land-use approach allows solar energy production to coexist with farming activities, from crop cultivation to livestock grazing and supporting pollinator habitats.

The adoption of solar energy in rural areas has become a pivotal approach for promoting progress across various Sustainable Development Goals (SDGs). Rural areas, particularly in ...
