Drug-induced liver injury (DILI) is the most common cause for acute liver failure in the USA and Europe. DILI is also a leading cause of attrition of compounds in drug development and one of the two most ...

Early prediction of DILI is crucial for developing safer pharmaceuticals, yet current in vitro and in vivo testing methods are complex and cumbersome. In this study, we developed an extreme ...

Drug-induced liver injury (DILI) is a major concern in the pharmaceutical industry, as it is a leading cause of drug failure and withdrawal from the market. Understanding the complexities of ...

In this paper, we summarize the pathophysiology, diagnosis, medical management, and LT for DILI. Keywords: Liver failure, liver injury, toxic hepatitis.

Load shifting is an electricity management technique that shifts load demand from peak hours to off-peak hours of the day. In this article, we explore what is load shifting, its purpose, load shifting vs peak ...

Drug-induced liver injury (DILI) and herbal-induced liver injury (HILI) are well-recognized and symptomatically can mimic both acute and chronic liver diseases.

Drug-induced liver injury (DILI) is caused by various medications or herbals/nutritional supplements resulting in liver test abnormalities or hepatic dysfunction.

With this aim, we explored the utility of assessing changes in the plasma metabolomic profiles of 79 DILI patients assessed by the RUCAM (Roussel Uclaf Causality Assessment Method) score to better ...
