Can I DIY solar panel removal?

DIY solar panel removal is not for the faint of heart and requires a lot of expertise and potentially unavoidable certifications. If you own your own system, it is possible to go this route, but remember that if something were to go wrong, you would be the one holding the bag.

How do you disconnect a solar power system?

Disconnect the wires that run from the solar power system to the solar panels. Depending on the unit, you will typically need a screwdriver or a socket wrench to complete this step. Cover the wires as an extra precaution. Once the wires are disconnected it's wise to place electrical tape or a rubber terminal over the ends.

How do I remove a solar system?

To remove a solar system, follow these steps in reverse order of installation: Disconnect the solar system from your breakers and any metering equipment including grid interconnection. Disconnect all individual panels from their micro-inverters or disconnect the strings from the single inverter.

How do you replace a solar panel?

To replace a solar panel, disconnect the pipes at either end of the panel and drain any excess water out of the pipes and panel before removing the panel from the roof. Repeat this process until all of the panels are removed or the damaged ones are replaced. Once the new panels are connected, turn the water pump back on.
