We are currently constructing three solar projects in North Carolina, including Maple Leaf Solar. Combined they will provide a total generation capacity of ~180 MW of renewable energy that is ...

Wind and solar developers often bring their projects on line at the end of the calendar year. So, the new capacity tends to affect generation growth trends for the following year.

It is a renewable electricity source and does not pollute the air like coal power plants that rely on combustion of fossil fuels. Wind energy also provide economic benefits to local farming ...

The grant/approval is restricted to the generation of electric power from the generation facility of MLPL only and not for sale/supply of electric power to the BPC.

The collaborative project aims to harness the power of solar and wind energy through the installation of high efficiency solar panels and mid-size wind turbines on the Company's 18-acre ...

Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves using wind turbines to convert the turning motion of ...

Located off the south coast of France, installation of the project's three floating wind turbines will complete in 2024. The 25MW project is being developed by EDF Renewables and Maple Power.

Leaders in offshore wind in France, EDF Renewables together with Maple Power and its shareholders, have developed and built France's first offshore wind farm off the coast of Saint ...
