• Launching a spacecraft into space is one thing. •ringing it back is another. Spacecraft reentry is tricky business for several reasons. When an object enters the Earth's atmosphere, it ...

Orion's crew module, sometimes referred to as the capsule, capitalizes on more than 60 years of NASA space exploration experience. Built by main contractor Lockheed Martin, it can ...

Capsule-based crewed spacecraft such as Soyuz or Orion are often supported by a service or adapter module, and sometimes augmented with an extra module for extended space operations.

Here's everything to know about a launch date for the Artemis 2 mission. Space exploration in 2026: 6 spaceflights in year ahead, from NASA moon missions to SpaceX Starship ...

The spacecraft, which consists of a reusable space capsule and an expendable trunk module, has two variants: the 4-person Crew Dragon and Cargo Dragon, a replacement for the Dragon 1 cargo capsule.

They operate like any rocket engine in the vacuum of space, by propelling gases in one direction to create an opposite and equal force on the craft. There is no need for air for those gases to "push ...

A space capsule is a special kind of spacecraft built to carry things like cargo, science experiments, or even astronauts into space and back. What makes a capsule different from other spacecraft is its ...

Built by Thales Alenia Space in Italy, the primary structure of the service module is the backbone of the entire vehicle. Like the chassis of a car, the structure holds everything together.
