Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt ...

According to Solar Energy Industries Association and GTM Research, the market share of US has increased above 10% in the world's solar power installations in the past seven years.

Even though China is still adding to its fleet of coal-fired power stations, it also remains way ahead in clean energy growth, adding more solar and wind capacity than the rest of the world...

The tracker further provides national totals for distributed solar capacities for 31 countries/areas. For more information about inclusion criteria, please see our Methodology page.

Statistically, the number of installed solar power systems has skyrocketed over the last decade. As of now, there exists an extensive array of solar projects contributing to national energy ...

A report from the National Renewable Energy Laboratory found that solar power accounted for 54% of new U.S. electricity generation capacity in 2023, with 22 states generating more than 5% of their ...

A report from the National Renewable Energy Laboratory found that ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...
