Equipment and accessories such as racks, cabinets and bracing help minimize excessive motion that may cause undue strain on cable and network connections. There are two crucial ...

Protect telecom power systems from earthquakes by using cost-effective methods like steel braces and shear walls. These solutions help prevent damage and ensure operational continuity.

These cabinets are constructed using high-quality materials and fortified with secure locking mechanisms, tamper-evident seals, and intrusion detection systems to deter unauthorized entry.

Seismic Rack Cabinets are engineered to protect critical IT and networking equipment in earthquake-prone areas. Built with reinforced construction, they offer stability, durability, and reliable ...

AZE's outdoor enclosures are designed to provide secure, reliable, and efficient housing for critical telecommunications equipment in even the most demanding environments

We work with companies to custom manufacture seismic cabinets to fit their requirements. Working with Juniper, we manufactured this custom seismic rack to fit their MX2020 router, which is a 45RU high. ...

As global earthquake frequency increased 38% since 2000 (USGS 2023), telecom operators face a pressing question: Can conventional cabinet anchoring methods truly protect sensitive network ...

DDB Unlimited manufactures NEMA outdoor cabinets to protect telecommunications, fiber optics, Wi-Fi and other electronics from the outdoors.
