Norway is leading the way for a transition to zero emission in transport. Credit: Norwegian Electric Vehicle Association. Norway's electric vehicle transition is driven by government incentives ...

Norway's strategy for advancing the electric vehicle (EV) transition is underpinned by substantial government incentives and a tax system rooted in the "polluter pays" principle.

Explore Norway's 2025 EV market: policy changes, tax perks, Chinese brand disruption, import rules, and opportunities in the world's top electric vehicle market.

The Role of Policy and Consumer Behavior Norway's government has implemented policies that support the transition to electric vehicles for years. Even prior to the recent cuts, ...

Christina Bu of the Norwegian EV Association explains how a "polluter pays" policy and investment in infrastructure has driven EV adoption in Norway. Norway is leading the way in electric ...

By end of 2024, more than 27 percent of registered cars in Norway were battery electric (BEV). 88.9 percent of all new passenger cars sold were fully electric in 2024. The speed of the transition is ...

Given the substantial government expenditure on EV policies and the much improved competitive technology of EVs in most segments, we have adjusted EV incentives over the past years.

Now, with the country on the cusp of achieving its goal of 100% all-electric new car sales by 2025, the Norwegian government is signaling a new phase in its EV strategy, proposing changes ...
