There is an opportunity to open electric energy to new uses in the city, to reduce emissions while offering services that directly benefit the quality of life of the inhabitants, through...

Buildings and the construction industry in general are contributors to the current climate crisis in the form of energy consumption and CO2 emissions. Passive solar design, envelope material...

In this paper, a UBEM is developed using the characteristics and consumption of eight typical buildings (archetypes) in the climate zone of Santiago de Chile.

Ecolab utilizes our expertise and technology in our own operations. The Santiago facility achieved savings in water and energy use and is making a positive impact in our operations and community.

Climate, Energy & Sustainability The Columbia Global Center in Santiago recognizes the urgent need to address climate change, energy transitions, and environmental sustainability.

Due to its mild climate, its large amount of green areas, and its compact urban pattern with mixed functions, it has a low residential energy consumption, but not in its historic core, in which ...

From studying interior design and Spanish literature to living overseas for about 9 years working a variety of jobs, I finally ended up back in Madison studying environmental conservation. ...

Due to its geographic location in the south of the continent and its marked seasons, Santiago has had issues with its energy-consumption trends and the consequences of fossil-fuel sources that impact ...
