How much does battery storage cost in 2024?

BNEF's Levelized Cost of Electricity report indicates that the global benchmark cost for battery storage projects fell by a third in 2024 to \$104 per megawatt-hour (MWh), as a glut in supply due to slower electric vehicle sales led to cheaper prices for battery packs.

Will battery storage prices fall again in 2025?

Battery storage costs have fallen dramatically over the past two years, and the decline continues. Following a steep decline in 2024, Ember's analysis indicates that prices continued to fall sharply again in 2025.

Why are storage costs falling?

Cheaper hardware isn't the only reason storage costs are falling. Longer battery lifetimes, higher efficiencies, and lower financing costs, helped by clearer revenue models such as auctions, have all contributed to the sharp drop in LCOS.

Is battery storage on track for another major fall in 2025?

As Ember global electricity analyst Kostantsa Rangelova put it, after a 40% drop in battery equipment costs in 2024, the industry is now on track for another major fall in 2025. The economics of battery storage, she said, are "unrecognizable," and the industry is still adjusting to this new reality.

Battery prices have fallen over 90% in the past 15 years and will continue to fall as production costs decline and emerging battery technologies mature. EVs will be the most economical ...

The price drop is primarily driven by hardware innovations, such as larger battery cells and containerized designs, which enhance the energy efficiency of the systems.

BNEF's Levelized Cost of Electricity report indicates that the global benchmark cost for battery storage projects fell by a third in 2024 to \$104 per megawatt-hour (MWh), as a glut in supply ...

A new analysis from energy think tank Ember shows that utility-scale battery storage costs have fallen to \$65 per megawatt-hour (MWh) as of October 2025 in markets outside China and ...

Battery prices continue to tumble on the back of lower metal costs and increased scale, squeezing margins for manufacturers. Further price declines are expected over the next decade.

Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop

# Energy storage prices continue to fall

of almost 50% from 2023, a level at which battery electric vehicles would ...

Energy storage system prices have fallen to their lowest level on record, dropping to a global average of \$117/kWh in 2025. The new figures come from BloombergNEF's Energy Storage ...

Global average prices for turnkey battery storage systems fell by almost a third year-over-year, with sharp cost declines expected to continue.
