-----

Solar power is particularly well suited as a counterpart to wind power. These two emission-free energy sources complement each other: solar energy is available in summer and during the day, while the ...

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated ...

Solar power generation forecasts are based on weather forecasts, estimation of the total installed solar panel capacity and the estimated locations of the panels in Finland.

Solar power operations support Finland's goals of increasing self-sufficiency in energy and achieving carbon neutrality by 2035, to which Metsä- ja maatalousministeriö is also contributing. Our aim is to multiply the ...

Finland's large-scale solar capacity more than doubled in 2025, buoyed by the commissioning of the country's first solar projects larger than 50 MW. Another record year for ground ...

From vast solar parks to smart fabrics and solar-powered food production, Finnish researchers and companies are transforming low-light conditions into high-impact innovation.

Finland's utility-scale solar capacity soared in 2025, adding a record 227 MW. The article covers major projects like Utajärvi, Europe's northernmost large-scale park in Simo, upcoming ...

In Southern Finland, a solar panel with a surface area of one hectare has an energy production potential equivalent to 330 hectares of forest, which has an annual yield of ten cubic ...
