While Western media often paints China as the world's coal-guzzling giant, a different energy narrative is unfolding. Imagine this: By 2023, China's solar capacity alone could power all UK households 18 ...

Analyzing 145 solar farms, the analysis reveals that the actual power generation from solar PV systems in China is significantly below its technical potential. On average, more than half of ...

Solar power is the most spectacular of China's clean-energy game changers; its fruits can be seen all around the world and at every scale, from balconies in Baden Baden to seas of glass in...

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is going global. Chinese companies are...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy sources.
