---

More blades have more surface area, more weight & torque to keep the rotor spinning when the wind dies down. Smaller blade sets will allow the rotor to spin faster (higher RPMs, less ...

Our wind generator blades are properly balanced and eliminate the need for elaborate manual braking systems with the use of dynamic blade braking to slow the rotation of the blade set. Our blades are ...

Options for grid tied wind turbine generators.

Wind Generator Blades - several models to choose from for your generator project.

The wind turbine calculator finds the power output, efficiency, RPM, torque, and revenue of a wind turbine (either HAVT or VAWT).

Wind turbine blades are the front line of renewable energy conversion, turning invisible wind into mechanical rotation. Their aerodynamic ...

Vortex Generators (VGs) improve the performance of the blades by reducing flow separation. This leads to more torque turning the rotor and thus more energy produced.

Wind turbine blades are the front line of renewable energy conversion, turning invisible wind into mechanical rotation. Their aerodynamic design, material selection, and sensor integration ...
