The agency is responsible for ensuring non-discriminatory third-party access to power networks. The fluctuating supply of electricity from renewable sources requires upgrades to the entire power grid.

Given the complexity and significant potential of battery storage, the Federal Network Agency is in the spotlight, facing the daunting task of developing a system that strengthens grid stability through the ...

We will be happy to assist you with legal advice on all aspects of the current developments for BESS projects in Germany or on any questions in relation to the German legal ...

Pumped storage plants have been part of Germany's energy system for decades. However, the need for geographical differences in height means that they cannot be built everywhere in Germany.

The following pages give you the reports and figures on the current status of supply security and show you the variety of measures necessary to guarantee a continued high quality of supply in Germany.

In Germany (and the EU), electricity systems are not centrally planned, making monitoring crucial for system adequacy and supply security. The Federal Network Agency (BNetzA) ...

Emergency power supply could play a more significant role in the future, as Germany aims to establish a "capacity market" to ensure security of supply even during prolonged periods of low renewable ...

To uphold generation adequacy, the government has established a reserve system encompassing a capacity, a network, and a security reserve. The reserves consist of decommissioned coal and oil ...
