---

Renewable sources of electricity generation are continuing to grow strongly around the world, with global capacity expected to more than double by 2030, according to the IEA's latest ...

Regional dynamics demonstrate energy storage markets reaching maturity. Explore this evolution and our analysis of the key global themes to watch in the year ahead.

Residential PV is rising, capturing a larger share of rooftop installations with 108 GWDC, while commercial and industrial PV will see a slight dip, totaling 78 GWDC this year. The expanding solar ...

30 GW Energy storage target by 2025 at a federal level. Multiple provincial targets will likely exceed this.

To triple global renewable energy capacity by 2030 while maintaining electricity security, energy storage needs to increase six-times. To facilitate the rapid uptake of new solar PV and wind, ...

The global energy storage systems market recorded a demand was 222.79 GW in 2022 and is expected to reach 512.41 GW by 2030, growing at a CAGR of 11.6% from 2023 to 2030.

Summary: Explore how photovoltaic energy storage is transforming global energy systems. This article covers key applications, market trends, and real-world examples, offering insights for businesses and ...

Despite policy headwinds earlier in the year, energy storage additions in China and the US are set to continue growing this decade. The removal of storage mandates in China for ...
