-----

There are two variants, the Simple Solar Boiler and Advanced Solar Boiler which has three times the output of the former. Both require silver to craft, which makes them difficult to source ...

The size of these machines strongly encourages centralizing power production, storage, and distribution; however because these generators are largely made of Casings, they are substantially cheaper than ...

This spreadsheet lists all items needed to create an UV Solar Panel and an Octuple Compressed Solar. The sheet is outdated for the former, since it was made before solar factory was ...

It's an extremely low-efficiency generator that only runs during the day at ULV 1A.

Go for the Thermal Generator (it doesn't consume the actual lava cells, and produces 10k more EU than the geothermal generator). With a pump and liquid tesseracts from a lava lake in the ...

I've re-purposed part of my solar setup to power it so that 100% of the wood produced can be used to make steam for my GT boiler. I've set it to farm vanilla oak trees as I thought I might use the apples ...

GregTech uses voltage tiers to define its progression. The voltage of a Generator (or, for a multiblock generator, its Dynamo Hatch) determines the maximum amount of EU it can generate ...

Go for the Thermal Generator (it doesn't consume the actual lava cells, and produces 10k more EU than the geothermal generator). With a pump and liquid tesseracts from a lava lake in the Nether, that's ...
