US news outlets have reported resident concerns about leaked toxins from solar facilities in Texas that were damaged by a hailstorm. The Solar Energy Industries Association (SEIA) has ...

Outlines measures and best practices that can be taken to limit damage to solar photovoltaic (PV) modules.

Post-event forensic investigations indicate that hail stow protocols successfully prevented widespread physical damage at several utility-scale solar farms exposed to very severe hail.

Even hail is usually not enough to damage your solar panels. But in severe hailstorms, the beating might be too much for the panels to withstand. The good news is you're not entirely at the ...

Hail doesn't generally damage photovoltaic (PV) systems unless the hail is at least 1 3/4 inches in diameter, or about the size of a golf ball, according to the U.S. Department of Energy.

In mid-March, a hailstorm outside of Houston crippled an enormous solar plant, breaking panels and leaving local residents concerned about metals leaking into water supplies. Solar panels ...

Thousands of panels on a solar farm southwest of Houston, Texas, were damaged by a powerful hailstorm on March 15. Aerial footage showed rows of cracked photovoltaic cells at the ...

When golf ball-sized hail started hammering Texas last spring, solar panels across the state faced their ultimate test. The verdict? Most panels emerged unscathed, proving that today's ...
