Hot-Dip Galvanized Steel PV mounting structure designed and manufactured by HDsolar, adapt to the specific conditions of each project (terrain, calculation standard, climate conditions, etc.)

At present, there are generally two types of solar brackets: carbon steel and aluminum alloy, and carbon steel is treated with hot-dip galvanizing (aluminum alloy generally adopts anodizing ...

In short, there are many technical difficulties in the production process of the assembled section steel bracket, which requires metallurgical engineering and technical personnel to overcome technical ...

The installation area of Hot-Dip Galvanized Steel photovoltaic bracket can be ground screw, concrete foundation, C-shaped steel pile or H-shaped steel without geographical constraints, applicable ...

Hot-dip galvanized photovoltaic (PV) mounting is a metal structural system designed to provide support for solar PV modules, with the steel surface treated against corrosion through the hot-dip galvanizing ...

After fabrication, structural steel shall be adequately coated and protected by hot-dip galvanizing. The thickness of the hot-dip galvanizing shall comply with EN ISO 14713 and ISO 1461, ...

We can customize products according to customers' specific requirements, including specifications, colors, packaging, etc. Detailed technical parameters and requirements need to be provided.

Hot-dip galvanizing coating thickness requirements. The factors that affect the thickness of the zinc coating mainly include: base metal composition, surface roughness of the steel, content and ...
