What is especially confusing, however, is that this 36-cell solar panel will usually have a nominal voltage rating of 12V. Despite the output voltage being 18.56 volts, we still consider this a 12-volt solar panel.

For example, a solar panel with a voltage of 20V and an amperage of 5A has a wattage of 100W. This means the panel can produce 100 watts of power under optimal conditions.
