Why do microgrids require energy storage?

Microgrids need energy storage to respond to variability or loss of generation sources. S& C, as the leading microgrid provider, has extensive experience integrating energy storage systems. Microgrids involve integrating assets that were never designed to work together, let alone adapt to life without a utility connection.

Why should one choose S& C for a microgrid project?

S& C's broad range of expertise is indispensable for microgrid projects, making them easy and seamless while saving money by getting it right the first time. Microgrids require the integration of assets that were never built to work together, let alone adapt to life without a utility connection.

Why is S& C the leader in complete microgrid solutions?

S& C is the leading provider of complete microgrid solutions because we ensure that every piece of the puzzle fits perfectly. Our solutions go beyond the hardware, with proper configuration of controls, communications, and integration from the start. Choose a partner with unmatched experience.

What is the Gridmaster microgrid control system?

The GridMaster Microgrid Control System is a system that processes points and values every 2 seconds across all existing microgrid projects. It is the only integrator to receive an Authorization to Operate (ATO) from the U.S. Department of Defense, ensuring military-grade security protocols.
