What is a containerised generator set?

On a regular basis, containerised generator sets (CGS) are placed on board ships to provide replacement power in case of a damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers. There are currently no clear rules and requirements for such time limited installations.

How to install a generator set?

Ensure that the concrete is completely set and hardened before positioning the generator set. It is recommended to have foundation height about 100-150 mm above ground level, it helps to maintain cleanliness of genset. Check the foundation level diagonally as well as across the length for even flatness.

How do you install a generator set on a concrete pad?

Use a lifting device to safely lift and place the generator set level on the concrete pad. Ensure the crane has the capacity to place the generator set on the pad. Connect the generator set to a lifting device and crane. Move and align the generator set with the concrete mounting studs. Install attaching hardware (washer, lock washer, nut).

How should a generator room be ventilated?

C.5 Enough opening / shutters should be provided to the D.G. room so that entry and placement of D.G. set is possible easily. Ventilation of the generator room is necessary to remove heat and fumes dissipated by the engine, alternator and its accessories and to provide clean and fresh combustion air.

This guide is about the installation of containerized diesel generator sets, covering site preparation, foundation construction, basic system installation.
