The metropolitan government is targeting the widespread use of hydrogen, but strong competition and its physical properties are limiting its applications.

With the current renewable energy infrastructure, Japan would need to import renewable hydrogen, which presents a strategic paradox. While hydrogen is championed as a solution to ...

This paper introduces a case study of locating the priority to constructing hydrogen facilities in Tokyo based on a multiple dataset fusion method.

The HENCA conference, hosted by the Tokyo Metropolitan Government in October, brought cities and industry together to advance green hydrogen and drive action.

In a groundbreaking advancement poised to transform the landscape of clean energy storage, researchers at the Institute of Science Tokyo have unveiled a novel hydrogen battery ...

Institute of Science Tokyo researchers proposed a battery with magnesium hydride ( $MgH_2$ ) as the anode and hydrogen ( $H_2$ ) gas as the cathode.

While global hydrogen markets face volatility, Tokyo remains the world's most stable and advanced hydrogen society. Through TokyoH2 , we provide the international community with exclusive ...

In a significant development that may open the door to practical applications, researchers from Institute of Science Tokyo (Science Tokyo), Japan, have developed a hydrogen battery that can ...
