These projects focus on concepts that could achieve commercial success in the short term or as long as 10-20 years. This creates an innovation ecosystem in the United States, supporting the long-term ...

The U.S. Department of Energy is supporting various efforts to address end-of-life issues related to solar energy technologies, including recovering and recycling materials used to manufacture PV cells and ...

Rooftop solar PV installations in China may surge in the next three years as the country goes through a green energy transition and plans to make renewable energy a key cornerstone in ...

Here, we study and report the results of climate change implications of reshoring solar panel manufacturing as a robust and resilient strategy to reduce reliance on foreign PV panel...

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what solar ...

China's PV industry has established a preliminary policy system. Industrial policy is lagged compared with the market development. Reducing carbon footprint of PV products is critical for policy ...

In India, solar panel requirements for new buildings are starting to take shape at the state and city levels, although there isn't a uniform national mandate yet.

1999: Baoding Yingli undertook the national demonstration project of industrialization of 3MW polycrystalline silicon solar cells and application systems to fill the gap in the commercial ...
