Some statements you hear about solar and wind energy are just plain false. Some are a little bit true but so unbalanced, incomplete, and out of context that they might as well be false. And ...

In a new report, the Sabin Center for Climate Change Law, an affiliate of the Columbia Climate School, identifies and examines 33 of the most pervasive false claims about solar energy, ...

The argument sounds intuitive at first: wind turbines kill birds that fly into them, offshore wind farms force porpoises out of their habitats, and solar panels take up valuable farmland that could be used to grow ...

The false claims assessed in the report cover a wide variety of arguments against solar development. These include factually inaccurate arguments related to human health, the ...

Solar makes peak power on sunny days, while wind often generates more power during evening hours and cloudy weather. This complementary pattern provides more consistent renewable ...

Wind energy infrastructure doesn't produce power if the air isn't moving, and solar doesn't generate power if the sun's not out. But that doesn't mean that either source of energy is...

NREL data confirms lifecycle greenhouse gas emissions from wind are roughly equivalent to nuclear and solar, and dramatically lower than fossil fuels. Wind energy has a different emissions ...

Uncover the truth behind solar and wind power myths. Empower yourself with knowledge. Read the study now for insights!
