Exhaust fans must have the proper capacity for the specific application. In addition, the fans must be located so that engine exhaust gases will not re-enter the building.

Be sure the fan blade you choose clears the bearing housing outside diameter, and the fan cover inside diameter. Tolerances are $\pm 1/8$ " on all dimensions except bore.

The cooling system requires airflow supplied by a fan, which is either mechanically driven from the front of the generator's ICE or is electrically driven.

An engine generator comprises a fan cover made of die-cast aluminum alloy, and a power control unit including an aluminum base sheet. The base sheet has a power control circuit formed...

After determining the required amount of air, calculate the size of the air intake of the fan installed on the outside of the wall. The size of the inlet fan must be sufficient so that the amount of backflow does ...

the manufacturer had to consider the same airflow requirements for indoor applications. This information sheet discusses the design requirements for generator system enclosures, the different types of ...

We bore our aluminum fans to ± 0.002 " tolerance (straight bore only). We recommend you order your fan to the same micrometer measurement as the motor shaft journal. Please specify the keyway size ...

When working with generator fan covers, one question keeps buzzing like an overworked alternator: Is the inner diameter measured in millimeters (mm) or inches? Let's cut through the noise.
