How will rising demand affect electricity service in Kinshasa?

If this rising demand is not met with an increase in supply and improvements to electricity infrastructure, it will lead to further deterioration of electricity service. In Kinshasa, while 60% of the population has access to electricity, service quality and reliability is very poor.

Why does Kinshasa have a low power supply?

This is due mainly to the saturation of the Kinshasa distribution grid and capacity limitations for Inga 1 and 2 power plants. Power injected into the network is currently limited to about 500 MW, whereas peak demand is estimated at 1000 MW⁹.

How much electricity does Kinshasa use?

Residential electricity consumers are concentrated in Kinshasa and a few other large cities in the South or along the Eastern border with Rwanda and Uganda. Average annual demand per capita in Kinshasa is estimated at around 380 kWh, compared with around 330 kWh in Southern cities and 290 kWh in Eastern cities.

Is Snel still a key contributor to electricity access in Kinshasa?

SNEL, the national utility, remains a critical contributor to electricity access, in particular in Kinshasa, but is caught in a vicious cycle of mounting commercial losses, deteriorating assets and mounting debt.

In order to respond to the rapidly increasing demand for electricity in Kinshasa City, this project aims to improve the capacity, reliability, and stability of the city's power supply through the ...

This paper highlights the importance of adopting use of solar kits to overcome the shortage of electricity supply in the city of Kinshasa instead of polluting generators.

For effective liberalization, the Congolese government created the Electricity Regulatory Authority (ARE). This paper is a study based on the ARE's 2022 annual report, and best international practices ...

Faced with the current difficulties in terms of electricity in Kinshasa, SNEL is being responsive by announcing concrete solutions to improve electricity distribution in the Congolese capital.

Two power plants on the Congo River, with installed capacity of more than 1.7 gigawatts, are the country's main energy suppliers - they alone generate 90% of the electricity consumed in the ...
