By integrating solar power into telecommunications infrastructure, we are reducing reliance on non-renewable energy sources, lowering operational costs, and significantly decreasing emissions.

From concept phase advice, design and construction, operations and maintenance, DT Infrastructure delivers tailored solutions for solar farms, wind farms, battery energy storage systems and ...

As Malaysia's energy demands grow, Kuala Lumpur emerges as a strategic hub for modular energy storage solutions. This article explores how factory-made energy storage containers address power ...

We excel in constructing robust data centers, providing comprehensive services for high-rise buildings, and executing critical infrastructure projects, including MRT, double track railways, and TNB ...

Go big with our modular design for easy additional solar power capacity. Customize your container according to various configurations, power outputs, and storage capacity according to your needs.

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

This large-capacity, modular outdoor base station seamlessly integrates photovoltaic, wind power, and energy storage to provide a stable DC48V power supply and optical distribution.

In Malaysia, solar systems are rapidly becoming a staple in sustainable construction. As the country works towards meeting its renewable energy goals, several local developers and ...
