---

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

China continued to dominate the global market, representing ~60% of 2024 installs, up 52% y/y. The rest of the world was up 11% y/y. The IEA reported Pakistan's rapid rise to fourth place ...

In the preparation of reports, SolarPower Europe consults and gathers inputs from a wide range of industry associations, institutions, and stakeholders. Nevertheless, the figures and ...

The growing awareness of environmental benefits and long-term cost savings associated with solar energy has driven homeowners to adopt solar panels as a clean and sustainable power ...

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and market evolution from 1992 to 2024.

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry.

Recapturing Critical Materials Through Solar Panel Recycling The rapid growth of the solar PV industry, like any large-scale manufacturing industry, has led to global environmental and supply chain concerns.
