We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

US battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity. This growth highlights the importance of battery storage ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

The largest fuel source for this capacity is natural gas (42.7%), followed by coal (15%). Wind, nuclear, solar, and hydro together account for more than one-third of capacity. Solar continues to be the main ...

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. In 2024, a record 30 GW of utility-scale ...

California and New York led Q2 CCI storage installations, accounting for over 70% of total capacity, while Illinois gained traction. Community storage deployment remained limited due to ...

In terms of application, equipping energy storage in renewable electricity generation projects is the main application field for new type energy storage, with a cumulative installed capacity ratio accounting for ...

According to a study by the U.S. Energy Information Administration (EIA), battery energy storage systems account for the second-largest share of the installed capacity of new U.S. electric ...
