Kenya is building a wind farm, the Lake Turkana Wind Power (LTWP), in Marsabit County. As Africa's largest wind farm, the project will increase the national electricity supply while creating jobs and ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

While this rate of expansion still falls short of the global "Net Zero ...

Prolonged low-wind events, termed wind droughts, threaten wind turbine electricity generation, yet their future trajectories remain poorly understood.

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then ...

Let's take a look around the world at countries that, for one reason or another, have not yet embraced the benefits of wind energy.

Using an Original Institutional Economics (OIE) approach to examine real world developments, we argue that the global wind energy industry is increasingly volatile and ...

In an article published this week in the journal Nature Climate Change, the Beijing and Shenzhen-based researchers find that around 20% of the globe's wind turbines are located in areas ...
