---

Solar photovoltaic (PV) module imports into the United States have increased significantly in recent years and represent a sizable portion of installed solar capacity.

While China's PV component exports declined 19.3% YoY in October 2024, inverter shipments paradoxically grew 42.75% in volume. This divergence reveals a critical insight: global buyers are ...

This paper, which is based on new trade theory with substitutes, examines how antidumping and countervailing policies (ACPs) from the EU and the USA impact Chinese ...

Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale. This in turn demands a major additional expansion in manufacturing capacity, ...

In June 2024, the U.S. International Trade Commission found that imports of c-Si cells and modules from Vietnam, Malaysia, Thailand, and Cambodia may be harming the U.S. solar panel ...

Tariffs, foreign content restrictions, and antidumping and countervailing duty investigations have reshaped the landscape for imports of solar components and manufactured ...

Summary: The global trade of photovoltaic (PV) module inverters is booming, driven by renewable energy policies and cross-border supply chains. This article explores market dynamics, key ...

The goal of the tariffs is to raise import costs to protect or incentivize domestic manufacturing. In practice, the April tariffs significantly increased the landed cost of solar panels, ...
