How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

What is a grid-connected solar system?

As the name suggests, a grid-connected solar system is tied to the utility grid. What distinguishes it from other solar setups is that the energy runs in two different ways. When your household requires more energy than your solar system generates, the house draws in energy from the utility.

Should you connect solar panels to the electrical grid?

Connecting solar panels to the electrical grid is one of the most effective ways to maximize your solar investment while maintaining reliable power. Grid-tied solar systems allow you to use solar energy during the day, sell excess power back to the utility through net metering, and draw from the grid when needed.

What is a grid-tied solar system?

Grid-tied solar systems allow you to use solar energy during the day, sell excess power back to the utility through net metering, and draw from the grid when needed. However, proper grid connection requires careful planning, safety compliance, and often professional assistance.
