---

The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the "photovoltaic effect" - hence why we refer to solar cells as "photovoltaic", or PV ...

Photovoltaic technology lets you generate electricity from a renewable source: the sun. Unlike traditional methods of electricity generation, which often rely on fossil fuels, photovoltaics...

The International Residential Code (IRC) and the International Energy Conservation Code (IECC) reference related standards that apply if installing, respectively, a residential or commercial PV system

Most solar panels have a negative temperature coefficient, typically ranging from -0.2% to -0.5% per degree Celsius. This means that for every degree the temperature increases above 25°C, ...

Technical Information Bulletin for Solar PV Systems (on all types of buildings) -- Provides consistent and comprehensive information regarding current state requirements for solar ...

This guide explains how UL and ASTM standards, as well as FCC Part 15 and other requirements, apply to solar panels sold in the United States.

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. ...

Photovoltaics (PV) is the conversion of light into electricity using semiconducting materials that exhibit the photovoltaic effect, a phenomenon studied in physics, photochemistry, and electrochemistry. The ...
