---

The pilot has 15 solar hydrogen generators to produce an estimated 15 tones of green hydrogen per year. The facility includes a 200-kW fuel cell module supplied by Canada-based Ballard Power.

The site under development in Torres Vedras, Portugal, will have a hydrogen production with a capacity of 5MW. The project has two viable commercial options, transported by trucks to end users or ...

On August 1, 2025, Trina Green Hydrogen, the clean energy arm of China's Trina Solar, sent its first containerized hydrogen electrolyser system across the sea to Europe.

Project highlights Containerized Hydrogen Production System, Alkaline electrolysis cell, gas-liquid separation system, purification and drying system, hydrogen production power supply, control ...

The electrolytic water hydrogen production system is housed in four standard containers and will be used at a hydrogen refuelling station demonstration project of the Portuguese ...

This document therefore focuses on the activities of Galp and BP in Portugal, analysing the strategic framework, technological options, business models and integration with cross-border projects that ...

Portugal has set an ambitious target of 3 GW for installed hydrogen production capacity by 2030. Yet despite its potential, Portugal's current hydrogen capacity remains close to zero.

GreenH2Atlantic will enable the transition of a former coal-fired power plant into an innovative renewable hydrogen production hub, in alignment with Europe's decarbonization and energy transition strategies.
