Jones tracks the value of Chinese solar panels exported to different countries using Chinese customs data.

Chinese solar equipment has been flooding African markets, partly as a ripple effect of the US-China trade war. It's one of several factors helping the continent gain traction with...

African solar energy use is surging, with Chinese-made panels a common sight across the continent, on rooftops and in the massive renewable energy plants being built in countries such as...

The prices of made-in-China panels are by far the lowest in the world. South Africa's rapid pivot to Chinese solar gear, as affordable as it is, also doesn't resolve a basic problem.

China has become the undisputed powerhouse of global panel production, churning out over 120 GW of modules in the first half of 2025. A glut in supply pushed down international prices to ...

Where once fossil fuel plants and expensive diesel generators were the default option, solar has become the cheapest, fastest, and most scalable solution to Africa's chronic power gap.

In 2024, China produced 80% of the world's solar panels and remains by far the largest exporter. Africa's dependence on imports is heavy because local manufacturing capacity is still minimal.

Solar power costs in China surprise many first-time buyers. Prices have dropped significantly, but quality varies widely across suppliers and system types. A complete 5kW solar ...
