Solar PV manufacturing capacity and production by country and region, 2021-2027 - Chart and data by the International Energy Agency.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain.

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

The photovoltaic module industry is currently in a period of deep adjustment. Overall, the Matthew effect of "the strong getting stronger" is intensifying, while the entire industry faces ...

Domestic module manufacturing capacity grew an unprecedented 190% year-over-year, from just 14.5 GW at the end of 2023 to 42.1 GW at the end of 2024 and surpassed 50 GW in early ...

Capacity exceeded demand and module spot prices fell below \$0.10/W from late May 2024 -- a sign of intense oversupply and margin pressure. The ranking below reflects that ...

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.
