Why do emergency responders need in-building Erces?

When emergency responders enter a building their ability to maintain interoperable and continuous communications is paramount to the protection of both public safety and the public's safety. An In-Building ERCES ensures that communication signals can penetrate into all areas of buildings in accordance with model fire codes and standards.

Do emergency traffic messages have priority over other radio communications?

In a critical situation, emergency traffic has priority over all other radio communications (with the exception of "mayday" message). All other radio traffic must cease and personnel must monitor the emergency traffic message. After receipt of an "emergency traffic" message, it should be repeated on all appropriate channels.

Why do emergency responders need in-building wireless communications?

The need for in-building wireless communications for Emergency Responders resulted in the development of national model codes by the National Fire Protection Association (NFPA) and the International Code Council (ICC) as early as 2009.
